electronic components

**Every component of the  
DS2 line has the same dimensions**

# What is Box Design DS2?

Pro-Ject Audio Systems was founded in 1991 with the vision to design and build high-quality record players for a reasonable price. Since the very beginning, our philosophy has been to design products in a functional manner and to omit unnecessary buttons or features. Sound quality first is our dedication! The aesthetic of Pro-Ject products is driven by their audio functionality, so the user can concentrate on the essential goal:

## **Experience music with all of your senses.**

Over the years, we've created a complete line of analogue products to suit all

listening demands. Throughout this time, we've always strived to create products with the highest sound quality, designed and made in Europe, for the best price possible.

The success of our early analogue products has led us to develop hi-fi electronics engineered and manufactured according to the same principles as our acclaimed turntables. The result of this approach is our Box Design product line.

Our DS2 series is a full range of hi-fi stereo electronic components designed for everyone who wants to experience hi-fi stereo in superior quality.

**Every DS2 product is available with wooden side panels in walnut, rosewood or eucalyptus.**

# Why Box Design DS2?

As with every Box Design line, our DS2 series is designed as a modular product range. This means you can customize your music system to have the features you want.

The cabinets of the components are small enough to fit in almost any space. The enclosures are made of high-grade aluminum, available in silver or black.

Optional side panels, made from European wood, are perfectly aligned and matched to the finish of our woodgrain turntables. The machined aluminum buttons have the same finish as the housing, giving the products a high class appearance never before seen in this price range.

The interior circuit design consists of the latest state-of-the-art technologies and will satisfy the high expectations of any advanced hi-fi music lover.

If you're not particular about having multiple dedicated components, or just don't have the space, we offer the MaiA DS2 as an all-in-one solution. It features a pre-amp, phono stage, headphone amp, power amp, analogue stage, digital-to-analog converter and even bluetooth streaming.

The DS2 series is the ideal choice for delving deeper into high-end audio playback in a moderately size format with a beautiful, long-lasting enclosure.

1Xpression Carbon Classic

# HiFi Stereo DS2 Set

This system is for anyone who wants to enjoy their music in higher quality with a simple set up. MaiA DS2 is the perfect solution if you'd prefer not having too many boxes. As an analogue source, we recommend our 1Xpression Carbon Classic turntable, the 6th generation of the hi-fi classic Pro-Ject 1, which was first released in 1991.

It's also possible to connect your TV via the optical or analogue input, to get a better overall movie watching experience with superior sound performance.

Control your system with our self-developed Box Control app, with the included IR remote or simply with the mechanical potentiometer.

# Advanced HiFi Stereo DS2 Set

# Advanced HiFi Stereo DS2 Set

The ideal system for anyone who wants to add even more source components like the CD Box DS2 T or a streamer, which allows a user to listen wirelessly to high-res digital audio. As our analogue source, we choose the RPM 3 Carbon turntable, which features a low-resonance chassis that holds an inverted platter bearing with ceramic ball for reduced rumble. An outboard 16V AC motor is smoothly driven using an ultra-precise AC generator with DC power supply for further enhanced speed stability. The Speaker Box 10 DS2 is ideal for delivering high-resolution musical information and accurate reproduction of the musical soundstage.

Control your system with our self-developed Box Control app, with the included IR remote or simply with the mechanical potentiometer.

# Analogue Hifi Stereo DS2 Set

The Analogue Hifi Stereo DS2 Set is dedicated to the pure analogue audio fan who seeks the ultimate in high-end sound performance. All components are truly analogue – there is no digital circuitry. The Tube Box DS2 benefits from outstanding circuit technology developed by Dr. Sykora, ensuring a wonderfully involving natural sound.

The Classic SB Superpack is the ideal turntable for this set, as it features an MC cartridge which adds breathtaking dynamics to the already warm sound of the system. All components are aesthetically matched with the same walnut woodgrain finish to get a perfectly coherent look and feel.

# **Headphone DS2 Set**

The Headphone DS2 Set consists of two highly advanced and versatile products: the DAC Box DS2 ultra and the Head Box DS2 B. Together they will unleash the full potential of every record and headphone available. The DAC Box DS2 ultra offers support for the highest resolutions on the market, while the Head Box DS2 B sports incredible power to drive even the most demanding headphones.

With the advanced feature set of both units, you will be able to customize your sound to exactly suit your preferences.

# Digital HiFi Stereo DS2 Set

The Digital HiFi Stereo DS2 Set is the perfect mix of two-channel HiFi and a modern headphone listening rig. It features a pair of Speaker Box 5 DS2 bookshelf speakers, the advanced Pre Box DS2 digital, the powerful Amp Box DS2 and the linear power supply Power Box DS2 Sources.

These products are all known for their great value and generous feature set. With advanced and acclaimed technology, we are able to offer the customer the sound they deserve. By effectively protecting the Pre Box DS2 digital from the noisy and distorted sound of the mains with the linear power supply Power Box DS2 Sources, you will enjoy a clearer sound with better stereo imaging.

# Control it DS/RS

Control several Box Design components with a single all-in-one IR remote.

Housing front panel made  
from brushed aluminum.

**Free Box Control App available  
for Android and iOS**

# Box Control App

Allows easy control of MaiA DS2 and other IR controlled devices from Pro-Ject.

Add Remote Box S2 to your setup, if it does not include an IR controlled device.

## Term definitions

### **Pre Amplifier**

Device to connect and switch analogue and/or digital sources.  
Amplifies the signal for a power amplifier which drives the speakers.

### **Integrated Amplifier**

Combines pre and power amplifier in one device.

### **Power Amplifier**

Amplifies the signal from the pre amplifier to power and drive the speakers.

### **Headphone Amplifier**

Amplifies analogue and/or digital signals to drive headphones.  
Some integrated amplifiers and pre amplifiers have a headphone amplifier built-in.

### **Phono Amplifier**

Device to connect a turntable to a pre amplifier, integrated amplifier or any other audio device (such as AV receivers) which do not have a built-in phono pre amplifier. Amplifies and equalizes the phono signal to a standard line-level signal.

Some phono amplifiers also create a digital output which is used for digital recordings.

### **D/A Converter**

Device to connect and switch digital sources. Converts a digital signal to an analogue one. Requires a pre and power amplifier.

### **Streamer**

The "modern CD player". Works wired or wirelessly and plays digital files which are stored on a PC, USB stick or a network drive (NAS). Plays music from the „cloud“ via streaming services.

### **Power Supplies**

An upgrade to the standard power supplies. Cleans power from the mains by filtering interferences, which leads to even better state-of-the-art sound quality. Some power supplies are able to power multiple Box Design products and allow an elegant single power cable solution.

***Some DS2 components are listed more than once because they feature more than one main function.***
