

GOLD NOTE HP-5.2 AND HP-10 OPTIMAL SETTINGS FOR HEADPHONES

SETTINGS GUIDE FOR HIGH-END HEADPHONES

The HP-10 and HP-5.2 are headphone amplifiers designed to deliver an uncompromising listening experience. **Harman options** optimise the sound response according to the specific characteristics of each headphone model, ensuring balanced and faithful reproduction.

In addition to adjusting impedance, gain, and signal balance, the HP-10 and HP-5.2 offers four **Crossfeed** options, essential for recreating a more natural soundstage, reducing listening fatigue, and enhancing stereo imaging depth. Selecting the most suitable Crossfeed option depends on the headphone’s frequency response and personal listening preferences.

This guide will help you determine the best parameters for your setup, allowing you to customize your listening experience to your needs. Refer to the table below to find the recommended settings and fully unlock the potential of the HP-10 and HP-5.2 for perfectly calibrated sound.

OVER THE EAR HEADPHONES

HEADPHONE MODEL	CROSSFEED	DAMPING FACTOR	GAIN	HARMAN BALANCE (H)	HARMAN CLARITY (M)	HARMAN DEPTH (L)
